Mac OS X
Will also work for IPads and IPhones.

1. Connect your Mac to the IITD wired LAN using either DHCP or static IP based configuration. The mobile devices should be connected to IITD LAN or Internet using GPRS, EDGE, 3G or a temporary open WiFi connection.

2. Download the New IITD CA certificate , double-click on the file and follow the screen instructions to install it in the system or user keychain.
Please verify the SHA1 and the MD5 fingerprints of the certificate
from the
Certificates section
.

3. Download (right click and save-as) http://www.cc.iitd.ac.in/misc/IITD.mobileconfig   and save on your
Desktop
without any
.txt
extension.

4. Double-click and verify that the digital signature on the mobileconfig utility is correct. The utility is digitally signed by   *suban* or *nck* and you should see the message *IIT Delhi is verified*   . It is crucial that the
New IITD CA certificate
is installed before this step.

5. Follow the on-screen instructions to configure IITD calendar, IITD email, IITD_WIFI. You have to supply your credentials for   *Caldav.* The credentials for the other utilities can supplied later. You should be done.

The above procedure will also work on an **IPad** or an **IPhone** provided the device is connected to the network (for example using GPRS, 3G or to the Internet using some other WiFi connection). If for some reason your device running Mac OS X or IOS cannot be connected to the IITD LAN or the Internet using wired network or some other mechanism, then you can do the following:

1. Transfer the New IITD CA certificate and the file http://www.cc.iitd.ac.in/misc/IITD.mobil econfig   (note that this is a different utility from the one above) on to your device using an USB stick or through ITunes.

2. Double click on the New IITD CA certificate and follow the on-screen instructions to

install it in the system or user keychain.
Please verify the SHA1 and the MD5 fingerprints of the certificate
from the
 Certificates section
.

    3. Double click on the IITD.mobileconfig and verify that the digital signature on the
mobileconfig utility is correct. The utility is digitally signed by
suban
or
nck
and you should see the message
IIT Delhi is verified
. It is crucial that the
 New IITD CA certificate
is installed before this step.

    4. Follow the on-screen instructions to configure IITD email, IITD_WIFI. IITD calendar
server configuration will not be installed - you will have to configure CalDav separately later
using the procedure described in the   Calendar section .

All works? Let Larry Wall be praised!
